TITLE : PREPREG SHEET

ABSTRACT : PURPOSE: To contrive an improvement in peeling properties of a sheet by providing an uneven surfaces on one side or both the sides of a coating material of a prepreg sheet to one side of which a coating material is laminated.

CONSTITUTION: A reinforcing fiber is arranged unidirectionally and a sheet 3 impregnated with resin having fluidity at the normal temperature is laminated and made into a prepreg sheet. Then the prepreg sheet 4 is coated with a cover sheet 5. A projected or uneven surface is formed on one side or both the sides of the cover sheet 5. Therefore, when the projected part 1 of the cover sheet 5 is placed so that the projected part 1 comes into contact with the prepreg sheet 4, peeling properties of the cover sheet 5 and prepreg sheet 4 are improved and even if peeling paper 6 is applied to the undersurface of the prepreg 4, the peeling properties with the peeling paper 6 are improved.
